

A boost for municipalities to make environmental investments with the build-operate-transfer model

June 2022

Dear Clients, Colleagues and Friends,

The Build-Operate-Transfer Law numbered 3996 (the “**BOT Law**”) determines the scope and framework of investments that can be implemented under the build-operate-transfer (“**BOT**”) model. While municipalities had the opportunity to carry out various investments with the BOT model under the BOT Law previously, including the environmental projects, with the introduction of Additional Article 3 to the BOT Law on 15 June 2022, a more straightforward method for the environmental pollution prevention investments of the municipalities has been introduced and it paved the way for the rapid completion of these investments.

You may reach the details of the developments introduced by the additional article 3 [here](#).

Please do not hesitate to contact us for any further information on this alert.
